28. (New) The method of claim 26 wherein selecting a portion of said message includes selecting the initial portion of said message of a size sufficient to fit within an available field within said graphical user interface.

29. (New) The method of claim 26 wherein exporting said portion and said source information into a graphical user interface includes exporting said portion and said source information in a fashion that the portion *(may be)* provided under a heading indicating the source of the telephone call and said portion is displayed under a heading that indicates the subject matter of the telephone call.

30. (New) The method of claim 28 including exporting said portion and said source information into a graphical user interface that also lists received e-mail messages.

31. (New) The method of claim 30 including exporting said portion and said source information into a graphical user interface that indicates e-mail messages and provides information about the source of the e-mail messages and the subject matter of the e-mail messages.

32. (New) An article comprising a medium storing instructions that enable a processor-based system to:

identify information about the source of a telephonic message;

select a portion of said message;

convert said portion to text;

export said portion and said source information into a graphical user interface that displays a log of telephone calls

including the source information and information about the subject matter of the message; and

display said portion in said graphical user interface including displaying the source of said message and using said portion to indicate information about the subject matter of said message.

34. (New) The article of claim 32 further storing instructions that enable the processor-based system to export said portion and said source information so that the portion may be provided under a heading indicating the source of the telephone call and said portion is displayed under a heading that indicates the subject matter of the telephone call.

35. (New) The article of claim 34 further storing instructions that enable the processor-based system to export said portion and said source information into a graphical user interface that also lists received e-mail messages.

36. (New) The article of claim 35 further storing instructions that enable the processor-based system to export said portion and said source information into a graphical user interface that indicates e-mail messages and provides information about the source of the e-mail messages and the subject matter of the e-mail messages.

37. (New) A system comprising:
a processor; and
a memory coupled to said processor storing instructions that enable the processor to identify information about the source of a telephonic message, select a portion of
